### **DETAILED ACTION**

This Office Action is in response to applicant's communication of 2/26/2009. Currently amended claims 17-19, 36-37, and 39-49 are pending and rejected below.

### ***Response to Arguments***

Applicant's arguments with respect to claims 17-19, 36-37, and 39-49 have been considered but are moot in view of the new ground(s) of rejection.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 17-19, 36-37, and 39-49 are rejected under 35 U.S.C. 102(b) as anticipated by KINOSHITA et al. (U.S. Patent Number 6,280,434).

Kinoshita discloses a catheter for use in medical procedures comprising an elongated tubular structure with a proximal and distal end (as in figure 3) with an elastic restrictor opening at the distal end (small opening 3) and on the sidewall a plurality of openings angled toward the proximal end (holes 4) and where the openings and elastic restrictor are arranged such that the forces resulting from fluid flow are cumulative, substantially zero fluid force vector in all directions and balanced radially/axially (note fig 3, abstract, and paragraphs at column 2). Concerning claim 36 see hub (7) shaft (1), stem with proximal facing openings (holes 4) and distal tip section (near 2) and small opening (3).

Kinoshita discloses the claimed invention except for making the tubular structure with an external diameter of 4 French, and the elastic restrictor diameter of approximately 0.305 mm. It would have been obvious to one having ordinary skill in the art at the time the invention was made to make the tubular structure with an external diameter of 4 french, restrictor diameter of approximately 0.305 mm, since such a modification would have involved a mere change in the size of a component. A change in size is generally recognized as being within the level of ordinary skill in the art. *In re Rose*, 105 USPQ 237 (CCPA 1955).

### ***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP

§ 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
